WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Cut a blank: a top 40 x 49 mm with an 18 x 23 mm tab on one long edge, at the end nearest the plate centre.

Fold the tab down 90 degrees.

Tab: two 4.5 mm holes, 9 apart up and down, on its centre line.

Top: holes for the sensor's own screws at the outer end, so the sensor hangs over the frame flange, 3 to 21 from the frame's outer face.

Make two right-hand and two left-hand (mirror) brackets.

Fit: tab on the plate's inner face at its end, 140 to 158 up; the sensor lens 44 mm above the frame top.

Check: the top clears the wheel by at least 5 mm.
