WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Hood: a strip 189 wide x 2,208 long, rolled to a 76 mm inside radius so it covers 142 degrees of the brush (a sheet-metal shop's slip roll, or bend round a 150 mm pipe).

Its edges sit 25 above the brush axis; the top is on the centre line, 3 mm below the beam.

End guards (2): 1 mm sheet, the shape of the hood's end (145 wide, 52 tall), with folded tabs riveted inside the hood, 5 in from each end.

Five 5.5 mm holes along the top centre line at the spacer positions of the beam (from DRN-DWG-107).

Fit: M5 screws through the hood and 3 mm spacers into the rivet nuts in the beam's bottom face.

Check: 16 mm clear of the brush all along.
