P1	Making sketch for the prototype build plan	2026-09-30	AC

WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Cut two 780 mm lengths of channel with the same outside size as the module frame: 33 deep, a 25 mm top flange.

File both ends square; chamfer the row end of the top and bottom flanges 1 mm so the wheels and hook rollers roll on.

Web: two pairs of countersunk 5.5 mm holes for the rail brackets, 20 and 700 from the outer (dock) end, 11 and 21 down from the top. Heads must sit flush: the guide rollers run over them.

The upper rail is the mirror image (holes the same).

Check: the top flange is straight within 1 mm.
