WHERE IT GOES  
This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Upper legs (2): 1396 mm on the long side, 1377 on the short side; the top is cut at 25 degrees to sit flush with the top of the cross member. Lower legs (2): about 700 and 681. These lengths are for a lower glass edge 600 above level ground: on site, cut to suit so the rails line up with the module frames.

Two 8.5 mm holes across, to match the cross member.

Foot plate 100 x 100 x 6: the leg stands on it; join with an angle cleat and M6 bolts, or weld. Two 10 mm holes for ground anchors.

Fit: vertical, beside the cross member's outer face.

Check: plumb within 1 degree.

|                                                                      |             |                                                                                                     |                                         |                    |                       |
