WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Top block: 40 x 25 x 39. Outer plate: 40 x 12 x 86.
Bottom jaw: 40 x 25 x 12.
Screw the outer plate to the top block and the jaw with two M6 screws each, leaving a 35 mm gap between block and jaw.
Jaw: M8 tapped hole on its centre, 12.5 from the plate.
Buffer: 5 mm rubber, 25 x 34, glued to the block's face that faces the robot.
Fit: slide over the last module's frame edge, top block on the top flange, jaw under the bottom flange; tighten the M8 clamp screw up against the flange.
The top is 40 above the glass: the sensors pass over it and the wheels meet the buffer.
Check: it cannot be pulled along the frame by hand.

DUSTRUNNER
